

Book Cover

The cover price of a book is € **24.95**, but a bookstore gets **40%** off.
Shipping costs are € **3** for the first copy and **75** cents for each additional copy.
How much do n copies cost?
Write a function `final_price (n)` that RETURNS the price.

Input

The first line contains the n copies.

Output

The first line contains the final price.

Sample input

Sample output

24	379.53
0	0
10	159.45
