

### What is my age?

Write a program that takes in input a year Y and returns the age of a person. Let's suppose that the actual year is 2020.

If the year is  $\geq$  than the actual year, then return "Error".

#### Input

The first line contains the year.

#### Output

The first line contains the age of a person.

#### Sample input

#### Sample output

2023	Error
1999	21
1967	53
