Substring substitution

Write a program that takes a string A (max 30 char) and a string B that is a substring of A. The program should replace the substring B in A with ' * ' every time.
Example:

$$A = abchdfffchdtlchd$$
$$B = chd$$
$$A (final) = ab***fff***tl***$$

Input
The first line contains a string A and B.

Output
The first line contains the string A corrected.

Sample input   **Sample output**

Sample input	Sample output
abchdfffchdtlchd chd	ab***fff***tl***
hello world or	hello w**ld
hello world!	ERROR
