# Pandigital Numbers

A pandigital number contains all digits (0-9) at least once.
Your task is to write a function that takes an integer, returning true if the integer is pandigital, and false otherwise.

**Input**
The first line of input contains the integer.

**Output**
The first line contains "true" or "false".

| Sample input | Sample output |
|---|---|
| 98140723568910 | true |
| 90864523148909 | false |
| 90864523148909 | false |
