All UPPERCASE!

Write a function in C, called **alltoupper**, which converts all characters of the string passed as a parameter to uppercase. In practice, this is the "enhanced" version of the **toupper** library function, which however only acts on a single character.

Input
The first line contains the string A.

Output
The output contains the uppercase string A.

Sample input   **Sample output**

Sample input	Sample output
hello	HELLO
fgpe	FGPE
gaming	GAMING
